Overview

Airfield essentials is an object library for use in FSX

Objects in this library are:

1. Open door DHL hangar
2. Open door Hangar with night lit floor
3. Closed large DHL hangar
4. Small Airfield Control Tower
5. Runway guard lights
6. 3D taxiway Centre light
7. 3D Taxiway edge light with LODs
8. Raised hard surface Helipad
9. Terminal lounge seats (low poly)
10. High poly volumetric grass X2
11. Runway WigWags
12. Ground illuminating Ramp lights
13. Terminal connection walkway
14. ALSF2 approach light rack
15. Blast barrier

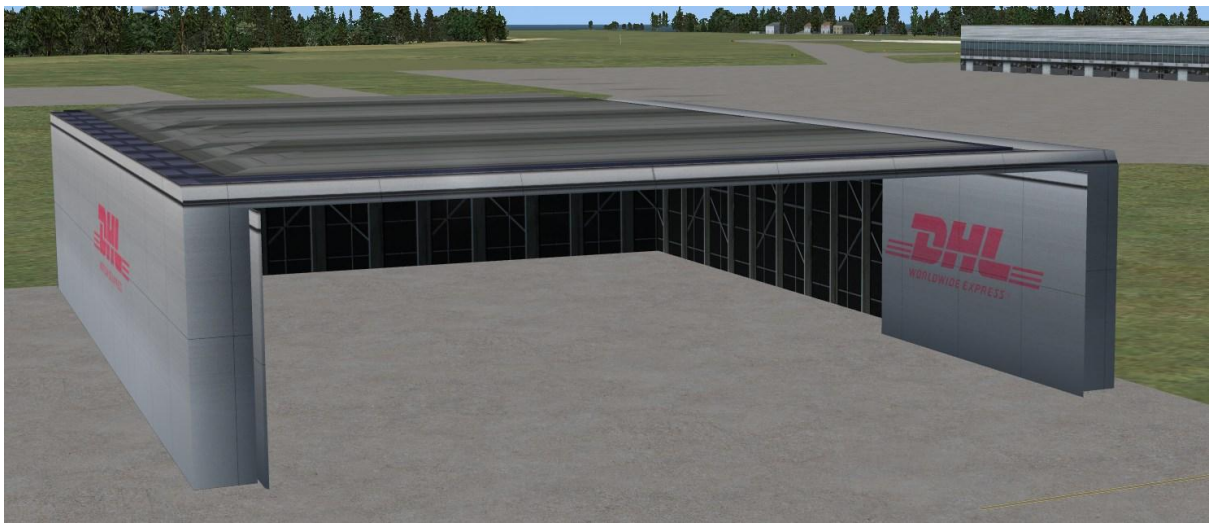
Due to issues with our Illuminations X V2 upload we have decided to take a few models from there and combine them with objects you would find at most airports.
The title of this may be Airfield Essentials but the objects in this pack are not essential to all airports.

Use and Reuse

If you wish to use any of these objects in a release you do not need permission. But we would appreciate credit in the documentation.
Should you wish to use these objects in a payware release then you would be required to seek permission to use these FREE objects in your commercial release, and the price for the product must not include these objects. They must remain free.

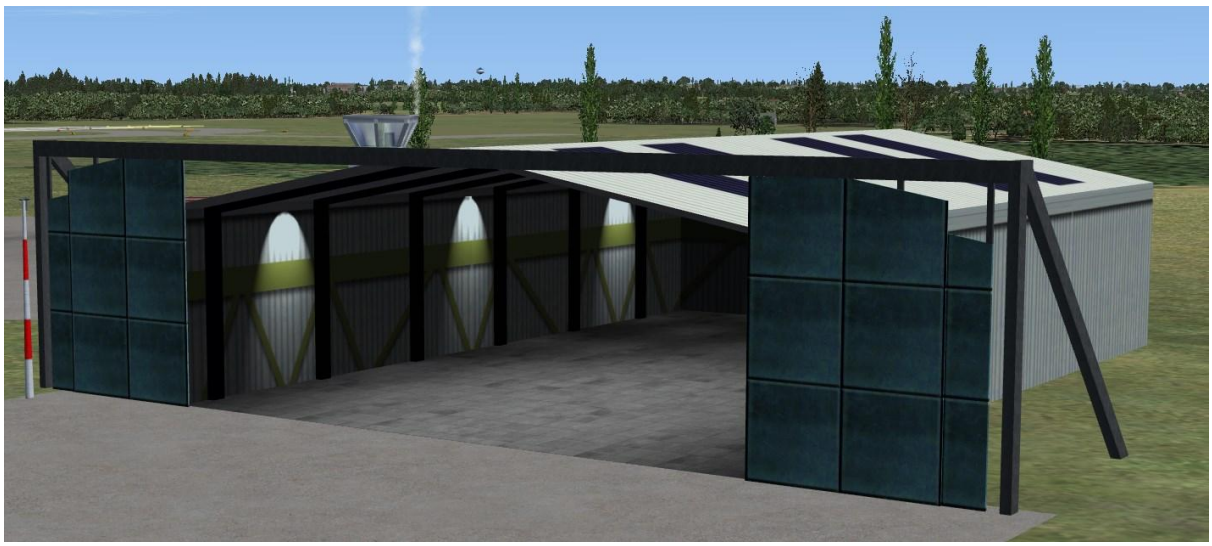
Object Details

Open Door DHL hangar



This hangar is not night lit and is the perfect size for a Boeing 737
Its simple design allows it to fit in to most airports and the inward open doors allows for close proximity to other buildings

Open Door Hangar with Night lit Floor

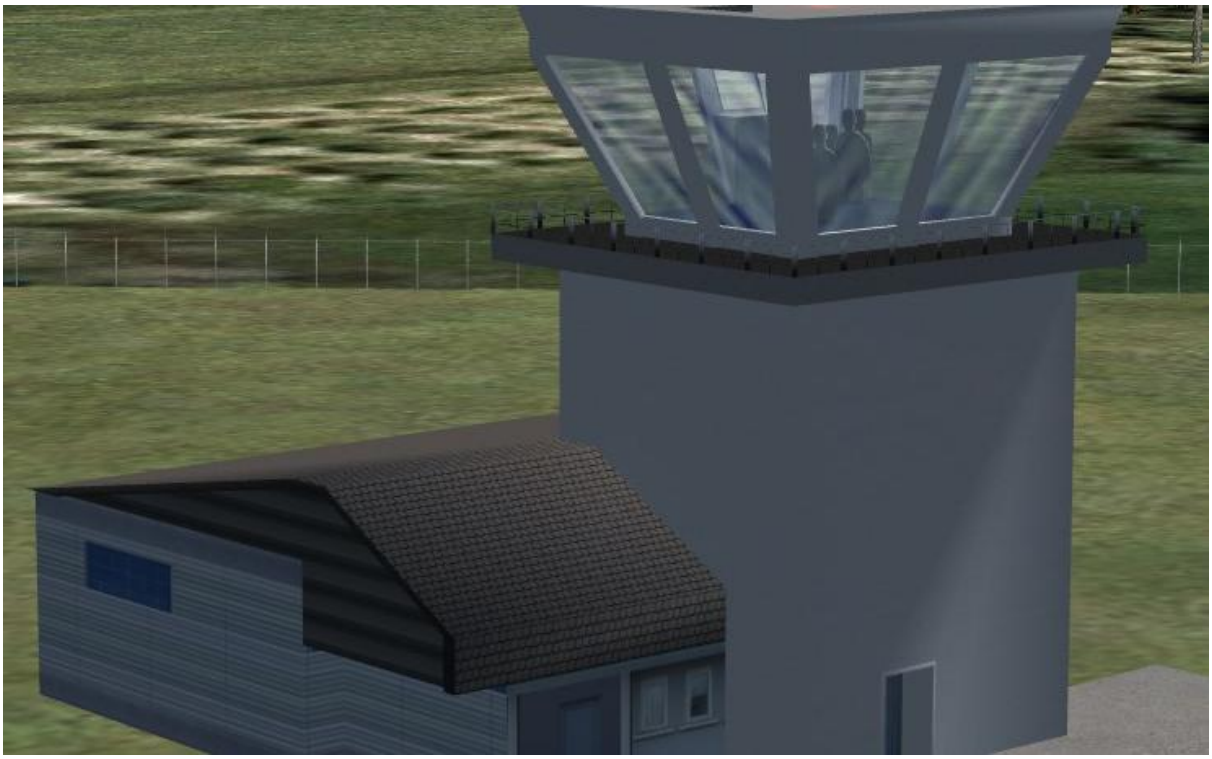


Another simple hangar with open doors, this takes up a bit more space but still designed to accommodate a 737. This hangar has the added bonus of a custom textured floor that is indeed lit at night

Closed Large Hangar

A very large closed hangar sporting shiny aluminium roof and DHL logo on the front

Small Airfield Control Tower



A small and compact control tower with internally lit office
Perfect for the small airfields around the world

Guard lights, Wigwags and taxiway lights

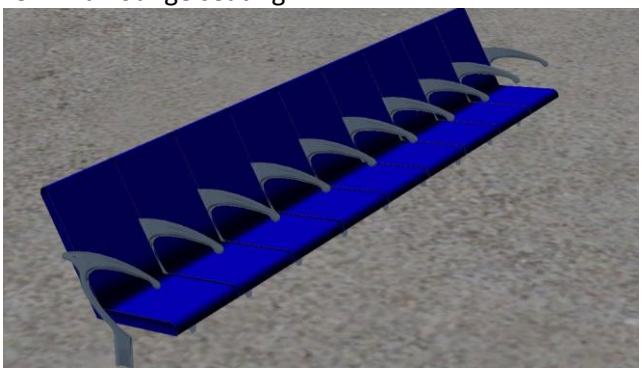
White, blue, green, amber and red, all are bloom enabled for that sense of glare.
Animated wigwag lit during day and night and red guards lit 24/7 too.
The other 3 are only illuminated at night, however these night only lights have pleasing 3D bases.

Raised Helipad

Basically, exactly what is says on the tin.. raised off the ground with access stairs. Hard surface allows for a landable area and large size of the helipad can accommodate the biggest of helicopters.

The following objects will include name and image only

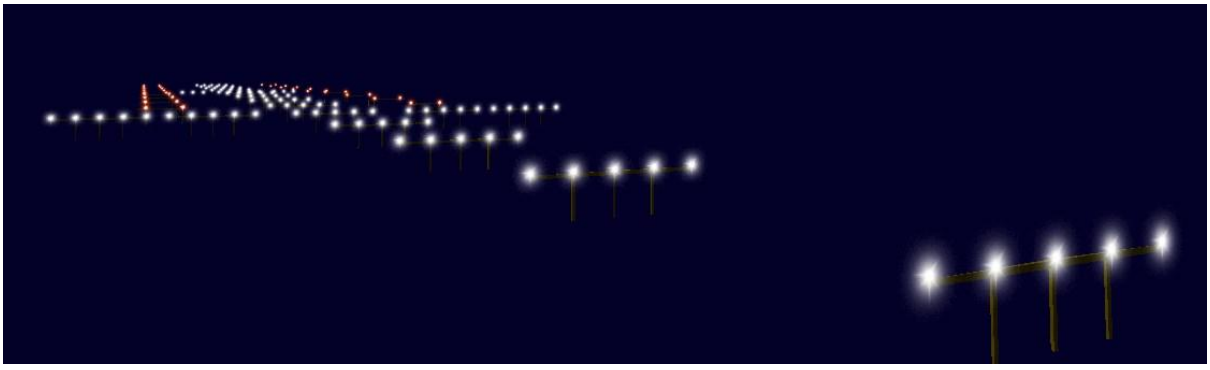
Terminal lounge seating



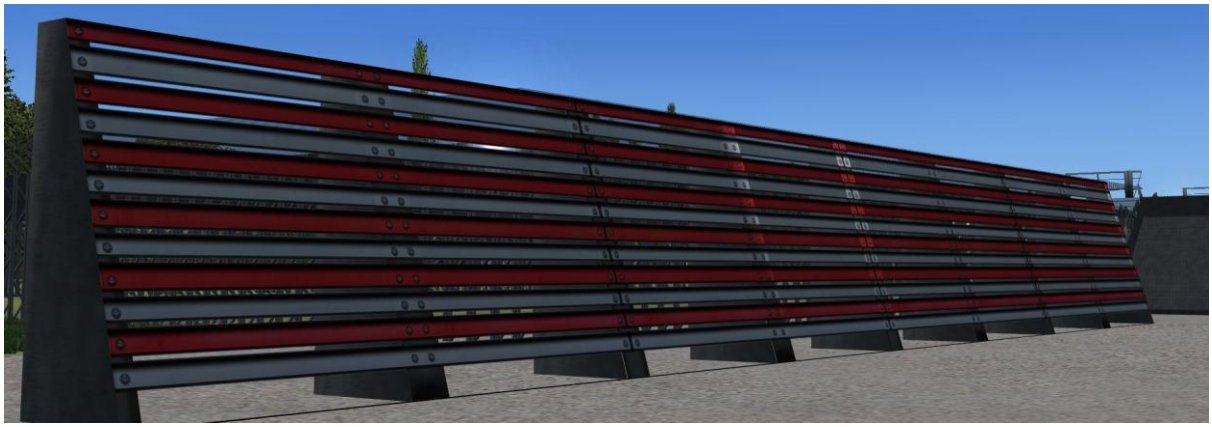
High Poly Volumetric grass

Terminal Connection walkway

ALSF2 Approach light system

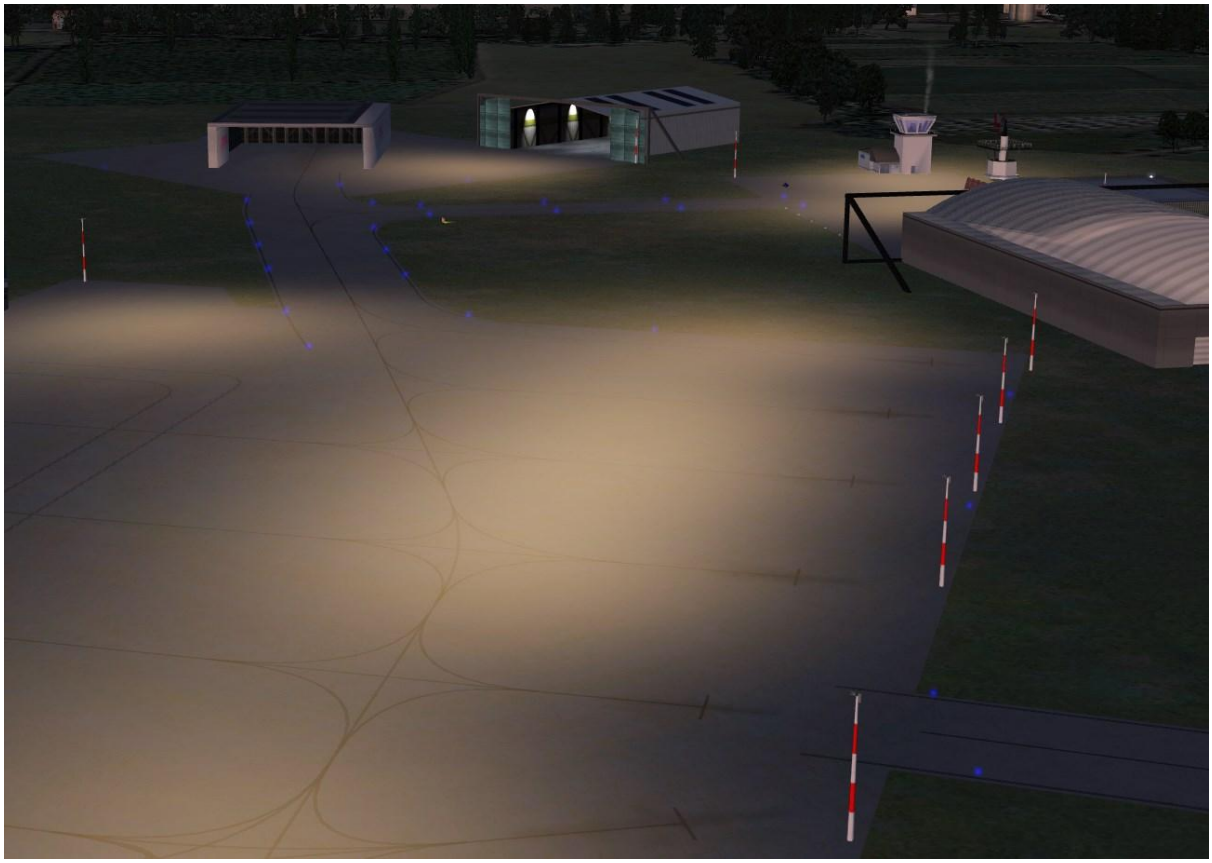


Blast Barrier



Ground Illuminating Ramp Lights

Light up you aprons and bring your airports to life.



These ramp lights are perfect for illuminating AFCAD airfields. They're a bit tricky to place using ADE so we recommend Instant Scenery, however ADE can easily be used to place these objects.

The ramp lights give zero illumination during the day but at night they light an area of nearly 200 square metres (656 square feet)
